Times were converted from China Standard Time (CST, UTC+8, no daylight saving) to US Eastern Time: the first value is Eastern Standard Time (EST, UTC-5), the second is Eastern Daylight Time (EDT, UTC-4, in effect from the second Sunday of March to the first Sunday of November). Because China does not observe daylight saving, the Eastern-Time equivalent shifts by 1 hour whenever US clocks change during the school year. For Central / Mountain / Pacific time, subtract 1, 2, or 3 hours respectively from the values shown.

** The AP Seminar class time is listed in the source document as 9:30, China time, without a clear AM/PM indication. Converted to US Eastern Time this falls in the evening of the previous calendar day — please verify this time directly with the school.*

*** AP Business and AP Computer Science A are already scheduled to track US clocks (noted in the source document as shifting with US DST), so the conversion above is approximate.*
